EDUCATION

University of Waterloo

Bachelor of Mathematics, Computational Mathematics and Statistics

Waterloo, ON

2025 – 2029

PROFESSIONAL EXPERIENCE

Software Developer Intern

TradExim (e-tradeFTZ)

Remote

Apr 2026 – Present

- Rebuilt 15+ full-stack public-facing pages, including homepage, sector, platform, and contact flows, using HTML, CSS, and JavaScript, replacing the legacy site end-to-end.
- Built contact form email delivery via Resend and Formsubmit APIs, routing submissions to inquiry inboxes.
- Redesigned account-creation flow to directly route users to correct registration paths, removing duplicate accounts.
- Managed production deployment through Rebel hosting, including DNS configuration and Google Search Console verification, shipping 5-7 production updates weekly.

TECHNICAL EXPERIENCE

Autonomous Systems Developer

WATonomous

Waterloo, ON

May 2026 – Present

- Built a modular C++ pipeline integrating LiDAR-based costmap generation, map memory, path planning, and velocity control for real-time robot navigation.
- Developed data-processing logic converting streaming sensor input into structured, obstacle-aware state, maintaining persistent memory for real-time updates.
- Tuned planner and controller behavior to improve obstacle clearance, waypoint tracking, and goal navigation.

Robotics Software Developer

Waterloo Aerial Robotics Group (WARG)

Waterloo, ON

Dec 2025 – Apr 2026

- Built and debugged a computer-vision algorithm (OpenCV, HSV-based detection) in Python, tuning parameters for reliable performance and validating with an automated test suite.
- Implemented a multiprocessing MAVLink pipeline in Python for telemetry, heartbeat, and command messaging.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, HTML/CSS

Frameworks & Data: React, Next.js, Node.js, FastAPI, PostgreSQL, Firebase, Supabase, REST APIs

Tools & Cloud: Git, GitHub, Docker, Linux/Unix, AWS, Cloudflare Workers, GitHub Actions, Vercel

PROJECTS

StepNote – AI Notetaking App | *Swift, Firebase, Supabase, Cloudflare Workers*

[App Store](#)

- Designed and shipped a full-stack iPadOS app for AI-powered feedback to students, published on the App Store.
- Architected a multi-service backend using Firebase for user data and authentication, Supabase for image storage, and Cloudflare Workers for serverless API endpoints.

Serverless Job Discovery Platform | *GitHub API, Web Scraping, Automated Data Pipelines*

[Source](#)

- Achieved minute-level job discovery (3 platforms, 1,900+ results/day) using Cloudflare Workers, Apify, and D1.
- Accomplished reliable application tracking, validated by 101 backend tests, by building deduplicated alerts and human-supervised Playwright automation.

Behaviourly – AI Mock Interview Platform | *Python, SQLite, Auth0, Gemini API*

[Source](#)

- Built the full React frontend for an AI-powered mock interview platform, delivering tailored interview preparation.
- Implemented browser-based camera recording and integrated the Gemini API for real-time response analysis, connecting frontend UI to backend AI processing.

ACHIEVEMENTS

Awards: President's Distinction Award (\$2,000), Undergraduate Research Entrance Award (\$1,500)

Certificates: University of Waterloo – Problem Solving Course (Summer 2024)
